DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, 18-30, drawn to a packet from a device to a host being erroneously recognized by the host apparatus as a first type; the device transmitting another packet in the first type, classified in class 710, subclass 11.
 - II. Claims 14-17, 31-34, drawn to determining a number of times a phase failure has occurred based on a number of STALL and a number of clear feature command packets received from a host, classified in class 713, subclass 503.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed (group I) does not require the particulars of the subcombination as claimed (group II) because a device can adjust packet type to the one erroneously recognized by a host through a response from host without determining phase failures. The subcombination has separate utility such as phase error detection in hand-shaking data transmissions.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2182

4. During a telephone conversation with Michael Schwartz (Reg. #40, 161), it was determined that claims 13, 32-34 have improper dependencies. Accordingly, Claim 13 is determined to depend on claim 12. Claim 32 is determined to depend on claim 31. Claims 33 and 34 are determined to depend claim 32. Affirmation and correction of these improper dependencies is also requested in response to this action.
